## IP-guard: Computer Security Software

### Winning Reasons

---

- This product is able to execute network record and catch image immediately. The innovation of repaid catching image is obviously leading in this business.
- Superior functions including 15 modules. All modules are very practical and can be combined based on customer's demands.
- Aim to Internet IP-control, this product has very high security.
- It has high market potential in information auditing, data using management, and data leakage security field.

### Features

---

- Rich Features, Powerful Function: IP-guard consists of 15 modules and each module can help customers solve certain issues related to computer/network usage.
- Central Management: IP-guard enables you to centrally control and monitor users' computer usage whenever and wherever you are.
- Easy to Use: The interface of IP-guard is user-friendly. Administrators can easily set any policy to control users' computer usage without any training.
- Fast Installation: IP-guard can be installed on your computers in two or three minutes. It only requires several hours to be installed on thousands of computers.
- Stealth Mode: IP-guard agent is running in the background and it is completely invisible to users.
- Complete Activity Record: IP-guard records everything users did on their computers and provides detailed logs for managers to learn more about users' PC usage in order to minimize data leakage risks.
- Unicode and Multi-languages/Safe Mode Support.
- Terminal/thin-client/VM support: Can provide Screen Capture and computer and Internet activity records.
- Support both PC and the user model management: IP-guard can apply the management policy to any specific user/computer.
- Flexible Time Management: IP-guard can limit users' specified operation in specified time range. For example, IP-guard can block users from accessing Facebook during office hours, but can allow them to use Facebook freely during lunch break.
